PORTABLE TELEPHONE APPARATUS

ABSTRACT OF THE DISCLOSURE

A portable telephone apparatus comprises: an input unit; a RAM including

5   a memory table for storing data used to specify a specific individual in

correspondence with an arbitrary icon data, data used to specify a portable

telephone apparatus owned by the specific individual, and positional information

of the portable telephone apparatus; a display unit for displaying various data;

and a CPU for executing a control operation that the CPU accesses the portable

10   telephone apparatus corresponding to the arbitrary icon data, downloads the

positional information of the portable telephone apparatus to automatically

update the storage content of the memory table, and superimposes icon data as

a position of the specific individual on a map displayed on the display unit based

upon the positional information of the portable telephone apparatus which is

15   owned by the specific individual in order to display thereon the icon data

superimposed on the map.
